Free lead generation resources

A practical reference for website and application development services. Start with published project requests, then research the contact details supplied by the original source.

12 RESOURCES / NO HUNTER PURCHASE REQUIRED

START HERE

Google Alerts

Links to newly indexed pages mentioning website projects, app development, agency recommendations or requests for proposals.

Free access: Ongoing email alerts. The linked page supplies the requirement and any published contact details; an alert is not email verification.

google.com/alerts | Official setup help

START HERE

LinkedIn public posts

People asking for a developer or agency, with the author name, company, profile and stated project needs.

Free access: Basic manual searching is free and subject to usage limits. Email addresses are available only when published or visible to you. Google Alerts can also find indexed public posts; coverage is incomplete.

LinkedIn - search member posts

REVIEW DAILY

Reddit - B2BForHire

Public project descriptions, posting dates, usernames, stated budgets and the response channel chosen by the poster.

Free access: Public browsing and account participation can be free. Use agency-friendly communities and review each community/post before replying; some hiring communities accept individual freelancers only.

reddit.com/r/b2bforhire

The distinction that keeps the list useful

A published request is evidence of a stated need. A company profile or verified email is a prospect, not proof that the company wants a website or application.

Official project requests

These public portals publish buying requirements and response instructions. Check that your business can meet each notice's supplier, location and submission requirements before spending time on a bid.

UK

Find a Tender - United Kingdom

Published requirements, buyer organization, dates, deadlines and instructions for responding. Contacts appear where published.

Free access: The current UK central procurement platform is free to search and use; suppliers can set up alerts.

find-tender.service.gov.uk | Official free-access guidance

UK

Contracts Finder - United Kingdom

Contract opportunities, procurement documents, buyer information and historical notices.

Free access: Search without an account. A free account adds saved searches and email updates. Use alongside Find a Tender.

gov.uk/contracts-finder

EU / API

TED - European Union

Published procurement specifications, organizations, deadlines and contacts when supplied in the notice.

Free access: Open access. The official Search API requires no authentication and supports structured notice retrieval for reuse.

ted.europa.eu | Official Search API documentation

AU

AusTender - Australia

Government opportunities, tender documents, closing dates and nominated agency contact officers.

Free access: Free registration and use, including automatic matching email notifications.

tenders.gov.au | Official free-access guidance

US

SAM.gov - United States

Federal opportunities, agency names, deadlines and published contact names, emails or telephone numbers.

Free access: Free discovery access. The public API requires an account key and has daily request limits. Check supplier and location eligibility for each opportunity.

sam.gov/opportunities | Official Opportunities API

FOR FUTURE AUTOMATION

TED exposes an openly accessible Search API. UK procurement data is another structured source to evaluate. Connect only matching, open opportunities; retain their original URLs and deadlines.

Business contact research

Use these sources for public company details or potential agency partners. They do not establish current project demand. Capped free databases can supplement your list, but they are not an unlimited replacement for Hunter.

MANUAL

Google Maps to company websites

Business name, website, public telephone, location and category. A company Contact/About page may publish an email or named contact.

Free access: Free manual browsing. This is not unrestricted Maps API access or a verified-email service. A listing alone does not establish a development need.

Google Maps - place research

AGENCY PARTNERS

Clutch

Agency names, services, locations and websites for potential outsourcing partnerships.

Free access: Public directory research. The Clutch Network is free for providers and buyers to join and use. Profiles and past reviews are not current project requests.

clutch.co/web-designers | Clutch Network cost and benefits

LIMITED ALLOWANCE

Apollo - Free Starter plan

Business-contact and company searches, subject to the account plan and available credits.

Free access: An ongoing free Starter plan is available. Credit, enrichment, export and API limits apply; check the allowance shown in your account. No exact quota is assumed here.

apollo.io/pricing

LIMITED ALLOWANCE

Lusha - Free plan

Business contact information and email or phone reveals, when available.

Free access: Currently up to 40 credits per month. An email reveal uses 1 credit and a phone reveal uses 5. This supplements Hunter; it does not provide unlimited leads.

lusha.com/pricing

Keep the original source

Record a source title, direct source URL, discovery date and the contact details actually published. Leave missing names, emails, budgets and requirements unknown.

Start with useful alerts

Create focused searches instead of collecting every company that matches a broad industry. These are search phrases for your discovery process, not a record of anyone's private search history.

Google Alerts - project requests

"looking for a web development agency"

"website redesign" "request for proposal"

"mobile app development" "tender"

"looking for a development partner"

LinkedIn public posts through Google search

site:linkedin.com/posts "looking for" "web developer"

site:linkedin.com/posts "website redesign" "agency"

site:linkedin.com/posts "mobile app" "development partner"

Use the same phrases in LinkedIn's Posts search. Google can alert only on public posts it indexes; it does not cover every LinkedIn post or provide a native LinkedIn alert/API.

Recommended order

1. Start now
   Google Alerts, LinkedIn Posts and agency-friendly public communities for stated website/app needs.
2. Add structured feeds
   Evaluate TED and UK procurement data for scheduled discovery without purchased contact credits.
3. Research the buyer
   Follow the original website/profile and use only published contact information. Keep capped databases as optional backups.

A useful record for follow-up

Resource title + source link + original requirement + publication/deadline when available + discovery date + published contact name/email or response channel. Review availability before following up.

This guide is a resource list, not confirmation that every source is connected to Xchop-Agent. Free browsing does not always include API access, contact exports or email-delivery verification. No minimum daily result count is implied.
